

Project Design Phase
Problem – Solution Fit

Date	30-06-2026
Team ID	23A51A4211
Project Name	Visitor Management System
Maximum Marks	2 Marks

Solution Fit:

The Visitor Management System developed on the ServiceNow platform provides a digital, centralized, and automated solution to overcome the operational constraints of traditional manual lobby logging processes. The platform allows business hosts or reception security teams to seamlessly pre-register or check-in arriving visitors through an intuitive Service Catalog interface.

- **Online Service Catalog Pre-Registration:** Eliminates reliance on paper-bound guest clipboards and physical sign-in books by digitizing the entry pipeline.
- **Dynamic Parameter Validation Check:** Leverages client scripting rules to catch invalid phone pattern strings instantly before logging information into the database.
- **Instant Status & State Operations:** Utilizes interactive platform UI Actions to shift visitor log parameters from 'Pending' to 'Checked In' with a single click at the reception desk.
- **Contactless QR Pass Verification:** Generates an automatic virtual visitor pass layout embedding an authenticated QR verification asset directly into the log row record.
- **Transactional Automated Notifications:** Instantly fires automated email confirmations and operational updates to host employees upon guest check-in events.

Live Operational Dashboards: Aggregates persistent log data to provide workspace security supervisors with real-time analytics monitoring building traffic profiles and busy visitor periods.

Customer Context & Behavioral Traits	Platform Solution Alignment
Customer Segment (CS): - Daily corporate visitors and contractors - Office hosts and business employees - Reception security guards and receptionists	Your Solution (SL): - Online visitor booking via Service Catalog - Dynamic data validation rules - Contactless QR-code digital identification badge passes - Automated email alerting mechanisms
Customer Behavior (BE): - Expects fast, intuitive, and modern tech workflows - Relies heavily on smartphone apps for daily logistics - Adopts self-service kiosk interfaces readily	Online & Offline Channels (CH): - ServiceNow Service Portal & mobile responsive forms - Transactional email dispatches - Physical corporate office building entry reception zones
Alternatives Explored (AS): - Manual clipboard entry binders - Physical stand-alone lobby badge printers - Verbal coordination with security desks	Platform Automation Leverage (SL): - Real-time automated ticket state mapping - Instant cloud persistence logging profiles - Automated platform reporting pipelines
Operational Limitations: - Long bottleneck lines at physical lobby reception desks - Clunky manual validation checks causing database typos - Limited real-time tracking of on-premise guests	Business Gains Realized: - Sharp reduction in peak-hour workspace lobby waiting queues - Enhanced database reliability with input error screening - Full visibility into facility occupancy patterns
Pain Points Addressed: - High risk of misplaced files and guest verification errors - Lack of centralized cloud tracking logs - Inefficient manual employee host arrival warning alerts	Operational Efficiencies: - Secure multi-tenant cloud storage for all records - Instant workspace host warning emails on visitor check-in - Unified analytical dashboards for management reviews
